### Can Hamster Kombat Price Hit \$0.1? Hamster Kombat Price Prediction

***Investors now expect to see the price of [Hamster Kombat](#) at \$0.1 following a 3% increase, however there are several problems.***

Holders of [Hamster Kombat](#) have been concerned for weeks due to the price chart's ongoing downward trajectory. Despite having 300 million players and strong player demand, this tap-to-earn game's native token did not perform well on the charts. According to CoinmarketCap data, there has been a 67% decline since introduction as of the time of publication. Today, though, things are different because the HMSTR price has started to gradually increase, giving its holders faith that their holdings will yield large gains.

## Hamster Kombat Price Increased by 3% today

Some have lost faith in the HMSTR token due to its persistent downward trajectory, but now it is rising for the first time since introduction, stunning them. A lot of people were worried that the HMSTR hoopla is about to die out. The price of Hamster Kombat has climbed 3% in the past 24 hours, to a current level of \$0.002845, thus there is new optimism. Although the spike pales in comparison to its overall decline, it is substantial enough to suggest that the euphoria is far from finished and that the token may recover.

With Bitcoin's price reaching a 4-month high of \$71,127.66, market bulls are making a triumphant comeback. There is a great deal of influence from Bitcoin (BTC), and the altcoins are also affected by its performance. The recent uptick in bullish attitude among market users led to an increase in the price of HMSTR, as speculation evolved into greed. The fact that the trading volume increased by 41.49% to \$46.55M shows that the cryptocurrency is becoming more popular among users. Consequently, it is now the 248th largest cryptocurrency by market cap, which has increased to \$183.07M.

## Can Hamster Kombat Price Hit \$0.1?

After weeks of declining value, the Hamster Kombat coin has recently experienced remarkable price increase. This, however, does not prove that gains will continue; the present spike occurred alongside the market's recovery as a whole. Even though it's popular, there are a lot of obstacles that limit its functionality, the most significant of which is the large token supply. There is intense competition in the market, and even X Empire's price performance is threatening its demand.

HMSTR's performance is constrained since there is a supply of 100B HMSTR, which meets user demand. To create scarcity and control supply, analysts advise implementing a token burn mechanism. Having stated that, the agent has remained silent on the matter.

Secondly, the initial cause of this dip was the significant volatility surrounding the token, which has persisted even since the airdrop. The players are still bitter about the prior airdrop, even if the team has revealed season 2. According to the analysts, there has been a noticeable drop in gaming activity and interest among players this month.

Finally, given that the HMSTR price has been falling since debut, sellers may once again exert control, causing the value to fall. Additionally, the technical analysis shows that the coin is under heavy selling pressure, which can hinder its future performance. On the other hand, the RSI data from today (24.331501) validates the buying movements, which may persist for a while, suggesting additional gains.

Interestingly, some cryptocurrency experts have predicted that by 2025, the price of Hamster Kombat will reach \$0.67. Since we are currently 71% from our ATH target of \$0.01004, a \$0.1 target is currently out of the question. However, there is a small chance that the token could reach new heights in the future, especially with Bull Run.
