Can Solana Price Reach \$600 in This Bull Market? Solana Price Prediction

The majority of investors think that [Solana](#)'s price might reach \$600 during this bull market cycle, making it the preferred option.

Key Takeaways:

- According to a recent survey, [Solana](#) may hit \$600 during current bull market.
- The reason behind Solana's impressive performance is its exposure to new markets like meme currencies and DePIN.
- Even while Solana has a lot of promise, 2025 is predicted to be the peak year for the entire cryptocurrency market.

Many hedge funds and venture capitalists have begun to favour Solana because they anticipate that its price would rise to \$600 during the current bull market.

Almost one-third of the seventy-six venture allocators polled by MV Global's recent Crypto Investment Manager Survey were of the opinion that SOL could achieve that milestone.

\$600 Target in Sight as Solana's Bullish Run Persists

The major assets in the cryptocurrency market, notably Solana, have had a field day for increases over the past week. After a week of growth, some coins outperformed Bitcoin. The price of Solana has soared this week, increasing by 34.7%, much outpacing Bitcoin's 28.1% rise over the same period.

After Donald Trump won the 47th presidential election and the crypto prediction markets went live, there was a huge influx of capital into the cryptocurrency market. Most major cryptocurrencies saw a resurgence in value as Bitcoin's price reached a fresh all-time high of \$88,933. Because of this, the price of Solana also increased dramatically.

The cryptocurrency seems to be in a good position to continue its upward trajectory at its present price of \$210.65. During this bull cycle, the currency is valued at \$600 according to MV Global's Q4 2024 Crypto Investment Manager Survey.

A total of seventy-six well-known hedge and venture fund managers participated in the MV Global study. This survey's findings have shed light on some current tendencies in the cryptocurrency market. Curiously, while 33% believe the Solana price will go beyond \$600 during this bull cycle, another 23.2% believe \$600 is the upper limit. Most people think the SOL price will stay around \$150 to \$300.

With a 49.2% increase over the last 30 days, the token has outperformed both Bitcoin (+40.6%) and Ethereum (+37.7%). Since it is more heavily invested in developing markets like DePIN and meme coins, the poll predicts that its outperformance will persist.

A More Detailed Examination of the Causes of the Increase

Research has shown that Solana has a lot of promise. It has the potential to outperform crypto ETFs, according to 75% of people. Bitcoin is all everyone can talk about, with estimates for this cycle ranging from \$100,000 to \$150,000. But now many are looking at alternative cryptocurrencies, such as SOL and ETH. These assets are attracting investors' attention due to their potential growth in emerging markets.

A small number of coins are the focus of the money, and the poll results indicate that the altcoin season will be short. Among those who took the survey, 43% have faith in AI tokens. It was found that 14.3 percent of the participants enjoyed DePIN tokens.

A quarter of those who took part were pessimistic about the future of gaming tokens. Layer-2 tokens were uninterested in by 24.6% of respondents.

Promoting meme currencies was something most investors were against. Very few (43% to be exact) put more than \$10,000 into it. Sectors such as AI demonstrate optimism in the MV Global study. But when it comes to other people, it sounds wary. Experts predict that 2025 will be the market's zenith.

Could SOL Be the Future? Experts Agree That

In contrast to the more enthusiastic predictions of \$300,000 and \$200,000 made by global investment bank VanEck and global investment bank Standard Chartered, respectively, these figures are very modest.

When it comes to Ethereum, forecasts are more divided. While one third of people anticipate its peak would be anywhere between \$3,000 and \$5,000, another third think it might reach \$5,000 to \$7,000. Ethereum has strong institutional backing and a central role in DeFi, notwithstanding the divergent opinions.

Finally, the liquidity growth from fiscal policies of a new US president could be good for Bitcoin's bullish outlook, but no influx of sufficient size or timing will occur for at least 16 to 24 months. As investors readjust their expectations, the wider cryptocurrency market's volatility is likely to continue; many anticipate a market peak in 2025.

Any growth from Solana will be thoroughly monitored as this cycle progresses. A consensus is beginning to form, and this kind of trajectory will solidify its place among the top cryptocurrencies in the future.
