Ethereum price forecast. According to finder According to the latest report of COM, ETH will exceed \$6800 this year. This will be a new historical high (ATH).

Financial technology and cryptocurrency experts recruited for the finder team believe that eth will peak at an average of \$6872 in 2022. This is \$2000 more than its previous ATH \$4900. Then, it is expected to fall to \$5783 by the end of 2022.

Fintech and cryptocurrency experts recruited by the finder team believe that eth will peak at an average of \$6872 in 2022. This is \$2000 more than its previous ATH \$4900. Then, it is expected to fall to \$5783 by the end of 2022.

Ethereum Price Forecast. Merge

Joseph Raczynski, a technical expert and futurist at Thomson Reuters, gave one of the most bullish forecasts for the year-end value of eth. He expects it to reach \$8000. He predicted that “merger” would play a role in its surge.

“The merger and upgrade of Ethereum should take place this summer. This may have an explosive impact on the token. People have been waiting for several years. It should be safer, 99% energy efficiency and deflation. If these are not the three elements of potential, as a leading [blockchain](#), I don’t know what it is.”

Raczynski is not the only one. 35% of the panellists said that eth’s deflation mechanism would have the greatest positive impact on prices after the merger.

Energy Factor

Another common idea is that 29% of the team members predict that the low energy consumption of eth will have a great impact on the price. 16% said that the higher trading volume per second of Eth will also have a great impact on the price.

Cohenjar CEO Asher Tan is optimistic about eth's forecast. He expects eth to peak at \$8500 in 2022 and then soar to \$35000 in 2030. Tan is one of 31% of the team members who predict that eth will experience a supply shock. This is important if there is no new etheric coin to enter the circulation field of merger and Shanghai upgrading.

"Consolidation is one of the biggest and most important events in cryptocurrency history - and has the ability to bring a huge supply shock to the system," Tan said

Keegan Francis is the global cryptocurrency editor for finder. He said that Ethereum is in a very uncertain position. Francis predicts that Ethereum will reach \$5000 by the end of 2022. By 2030, it will be worth \$10000.

"I don't have long-term confidence in Ethereum until it upgrades its system and meets its scale commitment. Nevertheless, I still think people will buy the token out of hype / commitment / potential. However, I don't think eth will always be the second largest asset."

Ethereum Price Forecast. Skeptic

Jeremy Britton, chief financial officer of Boston trading company, agreed. He expects sol, matic and other cryptocurrencies to surpass ETH. Carol Alexander, a professor of finance at the University of Sussex, is optimistic about the short-term prospects of eth. But she predicts that by the end of 2030, ETH will be almost worthless.

"With the development of DeFi, ETH will be more important, but finally by the end of this decade, with the development of new Internet of things technology, ETH will come together with all traditional blockchain native tokens — think about the entanglement of iota."

Overall, 61% of the team members said it was time to buy eth. 32% of the panelists said it was time to hold. But only 6% of the team said it was time to sell.
