What is Optimism?

Optimism is a layer-two blockchain solution built atop the Ethereum network, leveraging the security of the Ethereum mainnet while enhancing the scalability of the Ethereum ecosystem through the utilization of optimistic rollups. This innovative approach allows for transactions to be recorded on Optimism in a trustless manner, with the ultimate security guaranteed by Ethereum.

As one of the largest scaling solutions for Ethereum, Optimism boasts a total value locked (TVL) exceeding \$500 million and hosts 97 protocols, including notable ones such as Synthetix (SNX), a derivatives exchange, Uniswap (UNI), a decentralized exchange (DEX), and Velodrome (VELO), an

automated market maker (AMM). To begin utilizing Optimism, users can simply add the chain to their MetaMask wallet and bridge tokens like ETH to the L2 network.

OP is the native governance token of the Optimism network. It plays a crucial role in the direction and operation of the Optimism ecosystem, as OP token holders can participate in key decision-

making processes and help shape the future of Optimism.

The primary function of the OP token is to grant holders voting rights on proposals and modifications to the Optimism network. This mechanism ensures that the community has a say in the development and governance of the platform, allowing OP token holders to contribute to significant decisions pertaining to software upgrades, funding for public goods, and various other facets of the Optimism ecosystem.

Optimism (OP) Price Analysis

Over the past five months, the price of Optimism has exhibited a sideways trend, struggling to break through the \$2 barrier. While this consolidation phase may suggest a lack of conviction among buyers, crypto analyst Ali Martinez interprets it as the formation of an ascending triangle pattern.

This chart setup is characterized by a horizontal resistance trendline and an ascending support trendline. Typically, such a configuration emerges during an established uptrend, as temporary consolidation allows buyers to regain bullish momentum in preparation for the next significant upward movement.

Currently, within today's crypto market context, Optimism is trading at \$1.70—approximately 11% below the critical resistance breakout level. Notably, this altcoin previously formed similar patterns during its June-October 2023 consolidation and August-December lateral movement in 2022; both instances preceded substantial bull runs.

If historical trends are any indication, the crypto analyst posits that following a breakout rally could propel prices to \$7.20—a potential increase of 336%.

As of writing the article, \$OP is traded at \$ 1.7765, boasting a market cap of \$ 2.2B, and witnessing a hefty 24-hour trading volume of \$ 671.8M. \$OP Token saw a 24-hour price change of 12.08%, with minor fluctuations of -0.49% in the past hour.

Will Optimism Hit \$7?

Despite the sideways action, the OP coin has seen an active accumulation trend since February 2023. According to Santiment data, the large holders with 1 Million to 10 million coins have increased their holding from 131 Million to 741 million ADAs.

This significant rise in holdings implies growing confidence among institutional and large investors in the asset's long-term potential. Such accumulation trends often precede major market reversals and could signal reduced selling pressure.

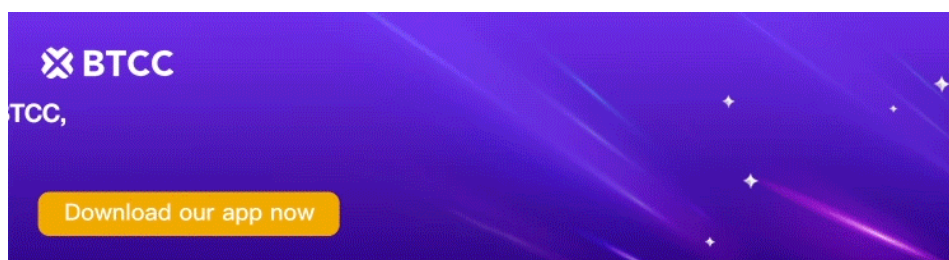

On the contrary, if the sellers continue defending the overhead resistance despite the U.S. election boost, the Optimism price could prolong consolidation.

Anyway, based on current bull run condition, it is quite likely that Optimism price could hit \$7 post Trump's election victory.

However, the cryptocurrencies are quite volatile. The current bullish sentiment doesn't guarantee future outlook. Whether Optimism (OP) is a good investment depends on your risk tolerance and goals. Be sure to conduct your own research before making any investment decisions.
