## **Is a 3000% Possible for the PNUT Price?**

Trading volume spiked by 278% in the past 24 hours, leading to PNUT's 150% price increase to

\$2.09, suggesting that investors are paying more attention to the cryptocurrency. With its market valuation reaching an astounding \$2.1 billion, PNUT has risen to the 51st position on CoinMarketCap, thanks to its quick ascent in activity.

Just days after PNUT was launched on Binance, there has been a jump in its value, which has further added to the enthusiasm. The Pump is where the token is produced. A whopping 1,574% increase has been seen on the fun memecoin platform in just the last week. Many investors are asking whether it's too late to join the market or if PNUT can continue to expand.

People are also curious about the history of the currency. The Meme coin was created in response to the public's outcry after the euthanasia of Peanut, a pet squirrel, by the New York City Department of Environmental Conservation. In the days leading up to the US elections, prominent personalities like Elon Musk and former US President Donald Trump condemned the move, sparking conversations on social media.

A lot of people are wondering if PNUT may go up 300% this week due to the increasing momentum and FOMO. If this memecoin can maintain its incredible rise, investors and crypto aficionados will be monitoring it attentively.

## Can PNUT Price Reach \$6?

If the price of Peanut the Squirrel manages to overcome the present level of resistance at \$2.3, it might experience a significant spike. If the price were to break out above this level, it would most likely start a momentum that would bring it closer to the \$4 level of resistance. The asset might lay the stage for a more ambitious goal, reaching \$6 in the next days, if it stays near \$4.

According to Binance's technical indicators, the market momentum for the PNUT pair has just changed dramatically. Additionally, the MACD line has crossed above the signal line, indicating a positive trend in the Moving Average Convergence Divergence (MACD). With an RSI of 77, PNUT has entered an overbought zone, according to the market analysis.

The current trajectory of PNUT indicates a good possibility of a 300% increase, thanks to its increasing popularity and market momentum. The recent upswing in PNUT's price could continue if trading volume increases and technical indicators continue to point to a bullish trend.
